PREINSTALLATION CHECKS

- Before the installation the lock must be selected correctly according to the door opening direction.
- While installing the door must be in half open state until the commissioning is completed.
- When installing the back panel, please see from the screw hole and make the connection wire not block the connection column hole to avoid damaging the connection wire when installing the screw.
- If the connection wire block the connection column hole, please replace the connection wire or expand the door internal hole to make enough space for placing the connection wire.
- After the installation is completed, when fingerprint, card, password(1234567890) and #, APP, key unlock; test whether the front handle and back handle unlock/lock normally or not.
